1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-10, 16, 17, and 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the language "it is examined" is not clear, to what does "it" refer? The language "said reference point . . . selected as the default position" is not clearly written since it is the position data of the reference point that would be selected and not the reference point wherein the reference points are base stations.

In claim 2, the language "as the reference points are used base stations" is not clear.

In claims 6 and 16, "the data base server" lacks a proper antecedent basis.

In claims 7 and 17, "the WAP protocol" is not defined, thus, the scope of claim 7 is not clear.

3. In claim 21, there exist several instances of improper antecedent bases, "the reference points" and "in the data base."
4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who

has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 1-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Bloebaum et al.

6. Bloebaum et al disclose the claimed method, system and device for positioning a wireless communication device including mobile device capable of communication and positioning.

Figure 1 shows the claimed system comprising a network of cellular base stations 103-105 each of which transmits a cell-ID signal and meet the claimed "reference points" and Figure 2 shows the mobile terminal. Figures 1 and 2 show the database 210a/210 as being positioned within the system and at the mobile terminal, either internally or externally. Figures 3 and 4 show the contents of the database as comprising the cell-ID indexed to position.

7. Claims 1-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Koshima et al.

8. Koshima et al disclose the claimed method, system and device for positioning a mobile station comprising mobile station 7, reference points 6 being identified by an identification number and a database 38 indexing reference point ID with position information so as to locate the mobile station on the basis of the repeater identification number.
